1 INTRODUCTION

Dear Student

Enclosed in this tutorial letter please find the following:

- Some guidance on the general format of the October/November 2013 exam for MAC2601
- Additional questions for practicing some of the module contents

Kind regards,

| | Telephone number | Office number | E-mail | |

LECTURERS: MAC2601

2 GENERAL EXAM INFORMATION

- The MAC2601 October/November 2013 exam question paper will consist of:
 - o 100 marks, of which:
 - 20% will be made up of multiple-choice questions
 - 80% will be made up of written questions
 - o 8 questions, of which:
 - Question 1 will contain ten multiple-choice sub-questions of two marks each
 - Questions 2 8 will be written questions
- Question 1 (multiple-choice questions) will be a combination of theory and short calculations. Write down the number of each sub-question in your <u>answer book</u> with the respective correct alternative next to the number. No mark-reading sheet will be provided.
- Questions 2 8 (written questions) contain mostly calculations (by "calculations" we also include statements and accounts which may have to be prepared), but also some theory
- Questions 2 8 (written questions) vary between 10 and 15 marks each
- Questions 2 8 (written questions) are broken up into smaller sections (sub-sections) varying between 1 and 8 marks each
- Each of the twelve topics will be examined in either the multiple-choice questions, or the written questions, or both
- The duration of the paper is 2 hours. This means you have 1,2 minutes (72 seconds) per mark. However, remember that it takes some time to write down the required details, to page through the paper, etc. and rather plan to use slightly less than 1,2 minutes per mark.
- Show and clearly cross-reference all your workings, as this module is mainly based on principles and the markers often refer to calculations to award marks if the final answer is incorrect.
- Time management is very important. Proper time management is <u>critical</u> for your success. The following are a few hints with regard to time management and other exam techniques:
 - It is important to study <u>ALL</u> the study units. Do not SPOT management accounting topics are easily integrated with each other and therefore it is <u>highly</u> probable that you will regret leaving out certain study units.
 - Practise by doing questions within the allocated time limits. You can practice time management techniques on the additional questions in section 3 of this tutorial letter although these questions are not an indication of what will be asked in the exam, we have provided time limits for each of the questions so that you can also use them to practice time management.
 - In your practice questions and in the exam, <u>do not</u> exceed the allocated minutes per individual question. Move on to the next question if the time for a question is over – remember to apply the 1,2 minutes per mark also to sub-sections of questions so that you will not spend all your time for a question on only one or two sub-sections if there are more.

- Try to earn as <u>many marks</u> as possible as <u>early as possible</u> in attempting a question.
- On the day of the exam: Remember your <u>watch</u> and your <u>non-programmable</u> calculator.
- You will be provided with the necessary answer book in the examination venue. Make sure that you fill in your student number correctly on the front page of the answer book, but <u>do not</u> write your student number on every page, as this wastes precious time.
- <u>Do not</u> re-write the "required" of the question or write down any unnecessary headings that won't earn you any marks. Just make sure you number your answers exactly the same as in the question paper – you can answer the questions in a different order, but they have to have the same numbers as in the question paper.
- Know your formats & formulae by heart. You will not be given a formula sheet in the exam. The only formulae that might be provided in the MAC2601 exam are the two equations for simple regression analysis (only if relevant to any of the questions). Sometimes half a mark may be awarded for writing down the correct formula or format. However, most of the marks in a question are usually for application of principles, so do not simply write down a formula and leave out the substitution or calculations and expect a good mark for the question. Writing down the formula is still very important, as there are often different formulae that could be used to get to the same answer, and the marker needs to know which formula you have applied in order to award as many marks as possible to your calculations.
- Read the question <u>carefully</u> (both the "given" and the "required") while this may seem obvious, you'd be surprised to see how many students fail to actually read and understand what the question is asking of them.
- You could <u>prioritise</u> the questions from easiest to hardest based on your experience of the different topics if there is a certain topic that you feel will earn you more marks than another, you are welcome to attempt the question that you are the <u>most</u> comfortable with first. This way you might <u>maximise</u> your marks and <u>increase</u> your chances of passing. However, using the exact numbering as in the question paper and still answering <u>all</u> the questions are very important, independent of whether you do the questions in the same order as in the paper, or in a different order.
- It is very important that you do not exceed the allocated time per question. Move on to the next question when your time for a question is depleted. We know it could be difficult to leave the remainder of a question when time for that question is up before you have written down everything that you know with regard to the question, but we often see that students obtain excellent marks in one or two individual questions or some sub-sections and then fail the exam because they haven't attempted all the questions.
- Should you use less time than available for a specific question, move to the next question. Only if you have time left after your final question, return to those questions that you haven't completed within the allocated time.
- All of these tips sound simple in theory, yet require discipline to implement in practice.

- Do not underestimate the importance of revision and practice be prepared for the exams. And don't let the real exam be the first exposure you get to time management!
- Apply these and other time-saving methods that you have discovered and practised!

3 ADDITIONAL QUESTIONS

The questions below have been provided for students to:

- Practice time management techniques
- Get additional practice applying some of the principles taught in the study guides

These extra questions are all written questions - we have not provided any additional multiple-choice questions as students already have quite a variety of multiple-choice questions in their assignments.

From enquiries, assignments, etc., the lecturers have noted that students are often struggling with some of the topics and we have decided to provide you with the opportunity for additional practice with regard to some of the principles addressed in these topics. Also, none of the assignments contain written questions on the topics in study guide 2 (topics 9-12) and we have therefore also provided additional questions about these four topics. Please note that these questions are NOT an indication of what will be asked in the exam – they are simply for additional practice.

All twelve topics will be examined!

QUESTION 1 – JOB COSTING (23 marks) (28 minutes)

Ntabalanga (Pty) Ltd. uses a job costing system. Manufacturing overheads are allocated to jobs on the basis of a predetermined rate of 50% of direct labour cost. The budget for April 2013 estimated that direct labour would be 12 500 hours at a budgeted rate of R50 per hour.

R

On 1 April 2013, the ledger of the company revealed the following information:

| 150 000 |
|----------------------------|
| |
| 117 000 6 000 |
| |
| 64 000 72 000 56 000 |
| |

The following transactions took place during April 2013:

- 1. Jobs Q and R were started in the current month.
- 2. Jobs N and R were completed during April 2013 and Job N was invoiced to a customer at a profit of 25% of cost price.

3. Material purchases amounted to R164 000.

4. Material issued:

| | R |
|-------------------------|--------|
| Job N | 26 000 |
| Job P | 12 000 |
| Job Q | 48 000 |
| • Job R | 60 000 |
| Indirect material | 16 000 |

5. Labour costs were as follows:

| Direct labour | | | |
|---|---------|--|--|
| Job M: 1 000 hours @ R44 per hour | 44 000 | | |
| Job N: 2 000 hours @ R50 per hour | 100 000 | | |
| Job P: 1 500 hours @ R50 per hour | 75 000 | | |
| Job Q: 2 000 hours @ R48 per hour | 96 000 | | |
| Job R: 1 000 hours @ R46 per hour | 46 000 | | |
| | | | |
| Indirect labour | 98 000 | | |

6. Other costs incurred during the month:

| • | Rent of factory | 30 000 |
|---|----------------------------------|--------|
| • | Selling and administrative costs | 86 000 |
| • | Depreciation of machines | 36 000 |

REQUIRED

Prepare the following general ledger accounts (properly balanced):

| • | Material control (this account is used for all direct and indirect materials) | (2) |
|---|---|--------------|
| • | Work in progress (WIP) control | (9) |
| • | Factory Salaries and Wages control account (this account is used for all direct | and indirect |
| | labour) | (1) |
| • | Finished goods control | (3½) |
| • | Factory Overhead control | (4) |
| • | Cost of sales | (1) |
| • | Sales | (1) |
| • | Trading account | (1½) |

QUESTION 2 - PROCESS COSTING (212 marks) (254 minutes)

Applicable to PARTS A - H (scenarios 1 - 8)

Practice Company (Pty) Ltd. manufactures a single product and uses a process costing system. Materials are added at the beginning of the process and conversion takes place evenly throughout the process.

May 20x5

| Opening WIP (20% complete) | 80 000 units | Material R320 000 | CC R128 000 |
|----------------------------|---------------|-------------------|---------------|
| Put into production | 140 000 units | Material R588 000 | CC R1 663 000 |
| Completed and transferred | 180 000 units | | |

Closing WIP 20 000 units

Normal wastage amounts to 5% of the inputs that reach the wastage point.

"CC" refers to conversion costs in this question.

PART A - Scenario 1 (26 marks) (31 minutes)

Additional information:

- Wastage occurs when the process is 20% complete.
- The company uses the weighted average method of inventory valuation.
- Closing WIP is 90% complete.

REQUIRED

| (7) |
|-----|
| (3) |
| |
| (8) |
| (8) |
| |

PART B - Scenario 2 (26 marks) (31 minutes)

Additional information:

- Wastage occurs when the process is 60% complete.
- The company uses the weighted average method of inventory valuation.
- Closing WIP is 90% complete.

REQUIRED

| (a) Prepare the quantity statement for scenario 2. | (7) |
|--|-----|
| (b) Prepare the production cost statement for scenario 2. | (3) |
| (c) Calculate and allocate the Rand value of the normal loss for purposes of the | |
| cost allocation statement of scenario 2. | (8) |
| (d) Prepare the cost allocation statement for scenario 2. | (8) |

PART C - Scenario 3 (26 marks) (31 minutes)

Additional information:

- Wastage occurs when the process is 15% complete.
- The company uses the weighted average method of inventory valuation.
- Closing WIP is 10% complete.

REQUIRED

| (a) Prepare the quantity statement for scenario 3. | (7) |
|--|-----|
| (b) Prepare the production cost statement for scenario 3. | (3) |
| (c) Calculate and allocate the Rand value of the normal loss for purposes of the | |
| cost allocation statement of scenario 3. | (8) |
| (d) Prepare the cost allocation statement for scenario 3. | (8) |

PART D - Scenario 4 (26 marks) (31 minutes)

Additional information:

- Wastage occurs at the end of the process.
- The company uses the weighted average method of inventory valuation.
- Closing WIP is 90% complete.

REQUIRED

PART E – Scenario 5 (27 marks) (32 minutes)

Additional information:

- Wastage occurs when the process is 20% complete.
- The company uses the FIFO method of inventory valuation.
- Closing WIP is 90% complete.

REQUIRED

(a) Prepare the quantity statement for scenario 5.
(b) Prepare the production cost statement for scenario 5.
(c) Calculate and allocate the Rand value of the normal loss for purposes of the cost allocation statement of scenario 5.
(d) Prepare the cost allocation statement for scenario 5.
(8)
(8)

PART F - Scenario 6 (27 marks) (32 minutes)

Additional information:

- Wastage occurs when the process is 60% complete.
- The company uses the FIFO method of inventory valuation.
- Closing WIP is 90% complete.

REQUIRED

PART G – Scenario 7 (27 marks) (32 minutes)

Additional information:

- Wastage occurs when the process is 15% complete.
- The company uses the FIFO method of inventory valuation.
- Closing WIP is 10% complete.

REQUIRED

(a) Prepare the quantity statement for scenario 7.(b) Prepare the production cost statement for scenario 7.(3)

- (c) Calculate and allocate the Rand value of the normal loss for purposes of the cost allocation statement of scenario 7.
- (8) (8)

(d) Prepare the cost allocation statement for scenario 7.

PART H – Scenario 8 (27 marks) (32 minutes)

Additional information:

- Wastage occurs at the end of the process.
- The company uses the FIFO method of inventory valuation.
- Closing WIP is 90% complete.

REQUIRED

QUESTION 3 - BUDGETING (10 marks) (12 minutes)

Rayi (Pty) Ltd. is a retail distributor of after-market automotive parts. The management accountant has prepared sales budgets for the six months from July to December 2013. These are presented below:

| Month | July | August | September | October | November | December |
|--------------|---------|---------|-----------|---------|----------|----------|
| Cash sales | 35 000 | 50 000 | 30 000 | 25 000 | 35 000 | 20 000 |
| Credit sales | 495 000 | 450 000 | 430 000 | 525 000 | 425 000 | 520 000 |
| Total sales | 530 000 | 500 000 | 460 000 | 550 000 | 460 000 | 540 000 |

Additional information:

Collections from accounts receivable are as follows:

- 50% in the month of sale and is subject to a 2% settlement discount
- 30% one month after the month of sale
- 15% two months after the month of sale and the remainder is uncollectible.

Rayi (Pty) Ltd.'s inventory requirements are equal to 30% of the next month's total budgeted sales amount. (Inventory is purchased in the month preceding its expected sale.) The suppliers' terms of payment require that 45% be paid in the month of purchase and the balance is payable in the month after the month of purchases. All purchases are on credit.

January 2014 sales are expected to comprise credit and cash sales of R580 000 and R40 000 respectively. Rayi (Pty) Ltd. Is expected to have a bank overdraft of R50 000 on 31 October 2013. The bank overdraft is as result of a dividend payment to be made in October.

Selling and administrative costs amount to 50% of the monthly total sales and includes depreciation of R20 000 per month.

REQUIRED

Prepare a cash budget for Rayi (Pty) Ltd. by month for November and December 2013. (10)

QUESTION 4 – STANDARD COSTING (15 marks; 18 minutes)

The following information applies to Another Example (Pty) Ltd. for the 20x7 financial year:

| Standards per unit of the final product Direct materials Direct labour (R90 per hour) Variable manufacturing overheads (vary with hours worked) Selling price | R24 R18 R10 R70 |
|--|---|
| Actual results Direct materials (5kg per unit) Direct labour (R94 per hour) Variable manufacturing overheads (vary with hours worked) Sales (50 000 units of the final product were produced and sold) | ? R1 034 000 R500 000 R3 400 000 |
| Variances already calculated Material quantity variance (unfavourable) Total material variance (favourable) | R100 000 R50 000 |
| REQUIRED | |
| (a) Calculate the actual price per kilogram of direct material. | (3) |
| (b) Calculate the following variances: (i) Labour rate variance (ii) Labour efficiency variance (iii) Total labour variance (iv) Variable manufacturing overhead rate variance for overheads that vary with hours worked (v) Variable manufacturing overhead efficiency variance for overheads that vary with hours worked (vi) Selling price variance | (2) (2) (2) (2) (2) (2) |

QUESTION 5 - RELEVANT COSTING (13 marks) (16 minutes)

Best Shampoo (Pty) Ltd. is a company that manufactures hair shampoo for men. The shampoo manufactured by the company cleanses and fortifies hair, leaving it smooth and healthy-looking. The company has requested you as a management accounting pundit to assist them with their production structure. The following information relates to the different types of shampoo the company manufactures. A maximum of 250 production hours are available to the company on a monthly basis.

| | Soothing Care | Sensitive Care | Classic Care |
|--|------------------|----------------|--------------|
| Expected monthly demand | 8 000 units | 12 000 units | 7 000 units |
| Selling price per unit (R) | 60 | 65 | 70 |
| Production costs Variable manufacturing | | | |
| costs per unit (R) | 20 | 25 | 15 |
| Variable selling costs per unit (Fixed cost | (R) 5 | 3 | 4 |
| (per unit based on production of Labour hours required | capacity)(R) 3,5 | 3,5 | 3,5 |
| to meet demand for product | 100 | 100 | 70 |

Additional information:

Best Shampoo also incurs administrative expenses on a monthly basis to operate the business. Administrative expenses allocated based on production capacity is as follows for the different types of shampoos: Soothing Care R5 per unit, R3 per unit for Sensitive Care and R2 per unit for Classic Care.

REQUIRED:

| 1. | Identify the limitation | (1) |
|----|---|-----|
| 2. | Calculate the contribution per unit of the product | (3) |
| 3. | Calculate contribution per unit of the limiting factor | (3) |
| 4. | Identify the order in which labour hours should be used to manufacture shampoos | (3) |
| 5. | Allocate labour hours to the shampoos until there are no labour hours left | (3) |

QUESTION 6 – SENSITIVITY ANALYSIS (20 marks) (24 minutes)

Huge Concerts (Pty) Ltd. is a South African based company in the entertainment sector based in Rosebank, Johannesburg. The main activity of the company is to invite famous and mostly Grammy award winning artists to perform in South Africa. When the artists are in South Africa they usually perform in the large South African cities of Johannesburg, Cape Town and Durban.

Huge Concerts have been pondering over the decision to bring a well known American artist into the South African shores for some time now. The company took a firm decision to invite in November 2013 an American artist called Sianna. The CEO of Huge Concerts is excited about Sianna coming to South Africa and even boasted to a friend about it.

Huge Concerts (Pty) Ltd. requested you to assist them with cost volume profit and profitability analysis.

A cost volume table was also prepared and you are provided with the following cost structure for Huge Concerts (Pty) Ltd. for the 2013 months listed below:

| Month | Cost | Tickets sold |
|-----------|----------|--------------|
| | | |
| May | R120 000 | 20 000 |
| June | R150 000 | 30 000 |
| July | R140 000 | 26 000 |
| August | R 90 000 | 15 000 |
| September | R100 000 | 18 000 |
| October | R130 000 | 25 000 |

Variable costs consist of the cost of a pack that revellers at the concert will be provided with at the entrance of the venue. The pack includes a bottle of wine and a snack. The proposed selling price of a ticket to go and see Sianna is R35.

REQUIRED

The Chief Executive of Huge Concerts has requested you to calculate the following:

The number of tickets that Huge Concerts have to sell in order to break even (7)
 How many tickets have to be sold to earn R20 000 target profit (3)
 What profit will result if 3 000 tickets are sold (3)
 What selling price have to be charged to show profit of R40 000 on the sale of 3 000 tickets (4)
 How many additional tickets have to be sold to cover R10 000 additional fixed costs of billboard advertisements next to the M2 highway and still break even (assume selling price of R35)

4 SOLUTIONS TO ADDITIONAL QUESTIONS

QUESTION 1 – JOB COSTING

⁴361 000 x 50% **✓**

QUESTION 2 - PROCESS COSTING

PART A

(a) Quantity statement

| Physical units | | | Ed | quivale | ent units | |
|----------------|---------------------------|-----------|-----------|---------|------------|------|
| Input | | Output | Raw mater | ials | Conversion | cost |
| (units) | Details | (units) | Units | % | Units | % |
| | <u>Input</u> | | | | | |
| 80 000 | Opening WIP | | | | | |
| 140 000 | Put into production | | | | | |
| | Output | | | | | |
| | Completed and transferred | 180 000√ | 180 000^ | 100 | 180 000^ | 100 |
| | Normal loss | ① 7000√ | 7 000^ | 100 | 1 400^ | 20 |
| | Abnormal loss | ② 13 000^ | 13 000^ | 100 | 2 600^ | 20 |
| | Closing WIP | 20 000^ | 20 000^ | 100 | 18 000^ | 90 |
| 220 000 | | 220 000 | 220 000 | | 202 000 | |

① $220\ 000 - 80\ 000 = 140\ 000$ $140\ 000\ x\ 5\% = 7\ 000$

(b) Production cost statement

| | Total | Material | Conversion cost |
|---|-----------|----------|-----------------|
| | R | R | R |
| Opening WIP | 448 000 | 320 000 | 128 000 |
| Current production cost | 2 251 000 | 588 000 | 1 663 000 |
| Total | 2 699 000 | 908 000 | 1 791 000 |
| Equivalent units - per quantity statement | | 220 000 | 202 000 |
| Equivalent cost per unit | R13,00 = | R4,13 | + R8,87 |

 $\sqrt{\sqrt{\sqrt{\sqrt{\sqrt{Based}}}}}$ (Based on principle; either 3 marks or zero)

(c) Calculation and allocation of the Rand value of the normal loss

NLR = NLM + NLC

 $= (7\ 000^ x\ R4,13^) + (1\ 400^ x\ R8,87^)$

= R28 910 + R12 418

= R41 328

② Balancing figure

| | Units | Calculation | R |
|---------------------------|----------|--|--------|
| Completed and transferred | 180 000^ | 180 000 / 213 000 x R28 910 | 24 431 |
| Abnormal loss | 13 000^ | 13 000 / 213 000 x R28 910 | 1 764 |
| Closing WIP | 20 000^ | 20 000 / 213 000 x R28 910 | 2 715 |
| TOTAL | 213 000 | √For dividing by total and multiplying | 28 910 |
| | | by 28 910 | |

CONVERSION COST

| | Units | Calculation | R |
|---------------------------|----------|--|--------|
| Completed and transferred | 180 000^ | 180 000 / 200 600 x R12 418 | 11 143 |
| Abnormal loss | 2 600^ | 2 600 / 200 600 x R12 418 | 161 |
| Closing WIP | 18 000^ | 18 000 / 200 600 x R12 418 | 1 114 |
| TOTAL | 200 600 | √For dividing by total and multiplying | 12 418 |

PART F

(a) Quantity statement

| | Physical units | | Eq | _l uivale | nt units | |
|-----------|---------------------------|-----------|-----------|---------------------|------------|-----|
| Input | | Output | Raw mater | rials | Conversi | ion |
| (units) | Details | (units) | Units | % | Units Cost | % |
| | <u>Input</u> | | | | | |
| 80 000 | Opening WIP | | | | | |
| 140 000 | Put into production | | | | | |
| | <u>Output</u> | | | | | |
| | Completed from: | | | | | |
| | - Opening WIP | ③ 76 000√ | _^ | 0 | 60 800^ | 80 |
| M and cc^ | - Current production | 104 000^ | 104 000 | 100 | 104 000 | 100 |
| | Completed and transferred | 180 000 | 104 000 | | 164 800 | |
| | Normal loss | ① 11 000√ | 11 000^ | 100 | 6 600^ | 60 |
| | Abnormal loss | ② 9 000^ | 9 000^ | 100 | 5 400^ | 60 |
| | Closing WIP | 20 000^ | 20 000^ | 100 | 18 000^ | 90 |
| 220 000 | • | 220 000 | 144 000 | | 194 800 | |

① $220\ 000\ x\ 5\% = 11\ 000$

(b) Production cost statement

| | Total | Material | Conversion cost |
|---|-----------|----------|-----------------|
| | R | R | R |
| Opening WIP | 448 000 | | |
| Current production cost | 2 251 000 | 588 000 | 1 663 000 |
| Total | 2 699 000 | | |
| Equivalent units - per quantity statement | | 144 000 | 194 800 |
| Equivalent cost per unit | R12,62 = | R4,08 | + R8,54 |

 $[\]sqrt{\sqrt{\sqrt{}}}$ (Based on principle; either 3 marks or zero)

(c) Calculation and allocation of the Rand value of the normal loss

NLR = NLM + NLC
=
$$(11\ 000^{\circ} \times R4,08^{\circ}) + (6\ 600^{\circ} \times R8,54^{\circ})$$

= R44 880 + R56 364

= R101 244

② Balancing figure

³ 20% < 60%, therefore reduce the units completed from opening WIP: 80 000 x (100% - 5%) = 80 000 x 95% = 76 000

| | Units | Calculation | R |
|---------------------------|----------|--|--------|
| Completed and transferred | 104 000√ | 104 000 / 133 000 x R44 880 | 35 094 |
| Abnormal loss | 9 000^ | 9 000 / 133 000 x R44 880 | 3 037 |
| Closing WIP | 20 000^ | 20 000 / 133 000 x R44 880 | 6 749 |
| TOTAL | 133 000 | ^For dividing by total and multiplying | 44 880 |
| | | by 44 880 | |

CONVERSION COST

| | Units | Calculation | R |
|---------------------------|----------|--|--------|

^c R580 000 + R40 000 = R620 000 x 30% x45%

QUESTION 4 - STANDARD COSTING

(a) Material

| AC or AQxAP | P | AQxSP | SQ allowed x AcProd x SP |
|-------------------|----------|-----------------------|--------------------------------|
| | < f | u > | |
| 5 x 50 000 x AP | 5 x 50 0 | 000 x SP | R24 x 50 000 = 1 200 000 |
| Purchase pri | ce var. | Quantity var. = R | 2100 000(u) (given) |
| | Total va | ır. = R50 000(f) give | n |

Calculation of standard price (SP) per kilogram:

(5 x 50 000 x SP) - (R1 200 000) = R100 000 250 000 SP = R1 300 000

 $SP = R1 300 000^{/} 250 000^{/}$

SP = R5,20 per kg

Purchase price variance = Total variance - quantity variance

 $= R50\ 000\ (f) - R100\ 000\ (u)$

= R150 000 (f)^

Calculation of actual price (AP) per kilogram:

(5 x 50 000 x AP)^-(5 x 50 000 x 5,20)^ = -R150 000 250 000 AP - 1 300 000 = -R150 000 250 000 AP = R1 150 000

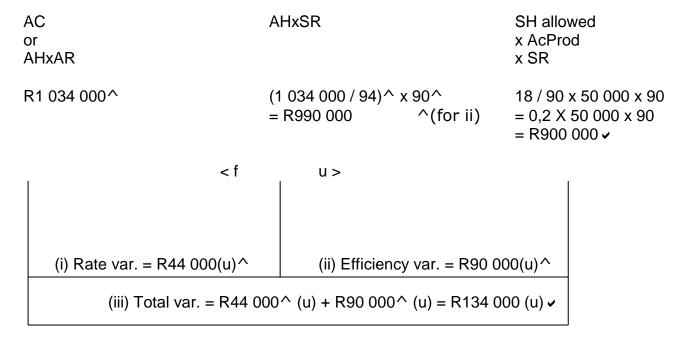

AP = $R1\ 150\ 000\ /\ 250\ 000^$

AP = R4,60 per kg

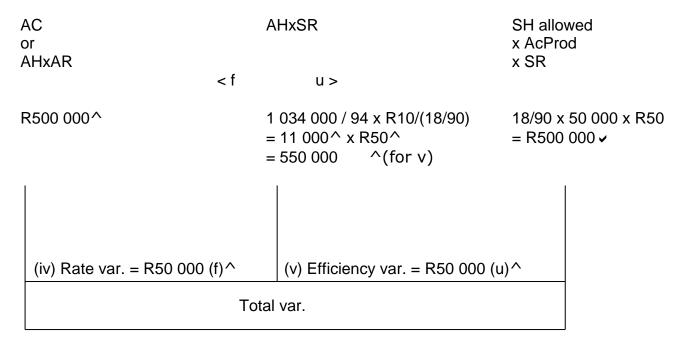

³ R460 000 x 50% - R20 000 ✓

⁴ R540 000 x 50% - R20 000 ✓

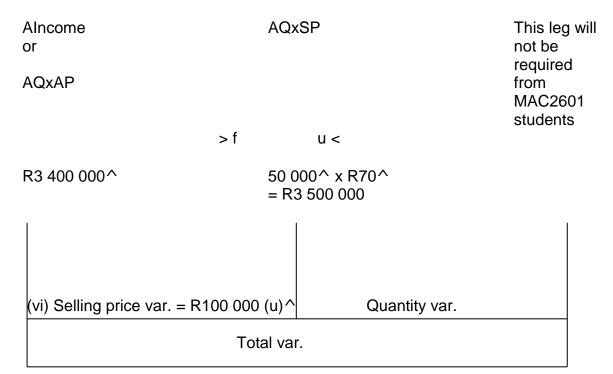

(b) (i) - (iii) Labour

(iv) – (v) Variable manufacturing overheads

(vii) Sales

QUESTION 5 - RELEVANT COSTING

1. Limiting factor

| Demand | Soothin 8 0 | • | Se | ensitive Care 12 000 | Classic Care 7 000 |
|------------------------------|----------------|------------|----------|-------------------------|-----------------------|
| Production r Hours requir | • | | 80 00 | 120 100 | 100 70 |
| Total hours Available ho | • | 270 250 | | (100 + 100 + 70) | |
| Limitation: | | | (√) | | |

2. Contribution per unit

| So | othing Care | Sensitive Care | Classic Care |
|------------------------------|---------------|----------------|---------------|
| Selling price | 60 | 65 | 70 |
| Variable manufacturing costs | (20) | (25) | (15) |
| Variable selling costs | <u>(5)</u> | <u>(3)</u> | <u>(4)</u> |
| Contribution per unit | <u>35</u> (√) | <u>37</u> (√) | <u>51</u> (√) |

3. Contribution per limiting factor

| So | othing Care | Sensitive Care | Classic Care |
|---------------------------------|---------------------|---------------------------|---------------------------|
| | | | |
| Contribution per unit (R) | 35 | 37 | 51 |
| Multiply by: | | | |
| Units per labour hour | 80 | 120 | 100 |
| Contribution per labour hour (R |) 2 800 (√) | 4 440 (√) | 5 100 (√) |

4. Identify the order in which the labour hours should be used to manufacture products

| 1. | Classic | R5 100 per labour hour | (√) |
|----|-----------|------------------------|---------------------|
| 2. | Sensitive | R4 440 per labour hour | (√) |
| 3. | Soothing | R2 800 per labour hour | (√) |

5. Allocate the labour hours

| L | _abour hours available | 250 |
|----|------------------------|----------------|
| 1. | Classic | <u>70</u> (√) |
| | Balance | 180 |
| 2. | Sensitive | <u>100</u> (√) |
| | Balance | 80 |
| 3. | Soothing | 80 (√) |

QUESTION 6 – SENSITIVITY ANALYSIS

Month Cost Activity

1. High/Low method: 7 marks

| June August Difference | R150 000 R 90 000 R 60 000 | 30 000 √ 15 000 √ 15 000 |
|----------------------------------|----------------------------------|---|
| R60 000 divided Variable cost | l by 15 000 | = R4 per unit $$ = R4 per unit |
| Fixed costs | | = R150 000 − (30 000*R4) √ = R30 000 |

Contribution per ticket

| Selling price | =R35 |
|-----------------------|----------------|
| Variable cost | = (R4) |
| | |
| Contribution per unit | <u>= R31</u> √ |

Breakeven units= Fixed costs/ contribution per unit

- = 30 000/31=R968 tickets per month
- 2 Marks: 1 Mark for R30 000 and 1 mark for dividing by R31 correct contribution $\sqrt{}$ Bonus mark for calculating the correct breakeven point [Max: 7]
- 2. Tickets to be sold to obtain R20 000 target profit

```
= (Fixed costs+ target profit)/ contribution per unit
```

- $= (R30\ 000\ (\sqrt{}) + R20\ 000\ (\sqrt{}))/R31$
- = 1613 tickets ($\sqrt{}$)
- 3. Profit from the sale of 3 000 tickets

Contribution (3 000*R31)

$$= R93 000 (\sqrt{})$$

Fixed costs = $(R30\ 000)\ (\sqrt{})$ Net profit = $R63\ 000\ (\sqrt{})$

4. What selling price have to be charged to show profit of R40 000 on sale of 3 000 tickets

Total Revenue = R82 000 ($\sqrt{}$) Variable costs (3 000* R4) = R12 000 ($\sqrt{}$) Fixed costs = R30 000 ($\sqrt{}$) Target profit = R40 000 ($\sqrt{}$)

Sales Revenue/ tickets to be sold= R82 000/3000 tickets= R27,33

5. How many additional tickets have to be sold to cover R10 000 additional fixed costs of billboard advertisements next to the M2 highway and still break even (SP = R35)

Additional fixed costs: R10 000($\sqrt{}$) / R31 ($\sqrt{}$) contribution per unit= 323 tickets ($\sqrt{}$)

Alternative answer

R40 000 divide by R31 = 1 291 tickets Additional tickets= 1 291 - 968 = 323 tickets (R40 000 = R30 000 + R10 000)
