## Self Assessments

### Chapter 2

Part 1 of 1 -

8.0 / 19.0 Points

#### Question 1 of 20

0.0 / 1.0 Points

The following are popular domain suffix

- A. COM  
EDU  
GOV
- B. NET  
COP  
BIZ
-   C. A and B
- D. None of the above

**Answer Key:** A

#### Question 2 of 20

1.0 / 1.0 Points

DNS is a Physical layer client-server system of computers and databases.

-   A. True
- B. False

**Answer Key:** False

#### Question 3 of 20

0.0 / 1.0 Points

 Windows is a DNS client that requests information from DNS name servers

**Answer Key:** Resolvers

#### Question 4 of 20

0.0 / 1.0 Points

 Dns hold databases, which are organized in a hierarchical structure

**Answer Key:** Name servers

#### Question 5 of 20

0.0 / 1.0 Points

The term for software whose code is publicly available for use and modification is  Open source

**Answer Key:** Open source

#### Question 6 of 20

0.0 / 1.0 Points

The 32-bit address can be any number from 1 to 255

-   A. True
- B. False

**Answer Key:** False

#### Question 7 of 20

0.0 / 1.0 Points

There are five classes in IPv4 addresses

-   A. True
- B. False

**Answer Key:** True

#### Question 8 of 20

1.0 / 1.0 Points

An IPv6 address has 128 bits written as eight blocks of hexadecimal numbers separated by semicolons

-   A. True
- B. False

**Answer Key:** False**Question 9 of 20**

1.0/ 1.0 Points

There are four types of IP addresses namely; Broadcasting, Multicasting, Unicasting and **✓ Anycasting****Answer Key:** Anycasting**Feedback:** Anycasting**Question 10 of 20**

0.0/ 1.0 Points

There are three tunneling protocols; ISATAP, **✗ 6 to 4** and Teredo**Answer Key:** 6to4**Question 11 of 20**

0.0/ 1.0 Points

Mention the protocol used by the echo request/reply to carry error messages and information about the network (use an acronym). **✗ Ping**.**Answer Key:** ICMP**Question 12 of 20**

1.0/ 1.0 Points

IPv4 networks use a version of ICMP called ICMPv6

- A. True
- ✓**  B. False

**Answer Key:** False**Question 13 of 20**

0.0/ 0.0 Points

Linux computers running IPv6, use ping6 to verify whether an IPv6 host is available.

- ✓**  A. True
- B. False

**Answer Key:** True**Question 14 of 20**

1.0/ 1.0 Points

Windows computers, use ping with the -6 switch to verify connectivity on IPv6 networks

- ✓**  A. True
- B. False

**Answer Key:** True**Question 15 of 20**

0.0/ 1.0 Points

\_\_\_\_\_ utility to view and manage TCP/IP settings

- A. ifconfig
- B. ipconfig
- ✗**  C. A and B
- D. None of the Above

**Answer Key:** A**Question 16 of 20**

1.0/ 1.0 Points

What is the function of nslookup?

- A. Enables one to query the DNS database from any computer on a network
- B. It allows one to find the host name of a device by specifying its IP address
- C. Useful for verifying a host is configured correctly or for troubleshooting DNS resolution problems
- ✓**  D. All of the Above

**Answer Key:** D**Question 17 of 20**

0.0/ 1.0 Points

To view IP configuration information, one can use the ifconfig command

- ✗**  A. True
- B. False

**Answer Key:** False**Question 18 of 20**

1.0/ 1.0 Points

If blocks in an IPv6 address contain all zeroes, they can be written as double colons (::).

- A. True  
 B. False

**Answer Key:** True

Question 19 of 20

1.0/ 1.0 Points

There are two variations of NAT, namely  Snat and  Dnat

**Answer Key:** SNAT, DNAT

Question 20 of 20

0.0/ 1.0 Points

What is the process where a gateway device substitutes the private IP addresses with its own public address?  Nat.

**Answer Key:** Address translation
